

The Center of Excellence in Environmental Toxicology

Seeks to work with students on a community-focused research project around
Climate Change and Health

Paid 8-week Summer 2018 Internship Opportunity
for Graduate and Undergraduate Students in
pre-medical, medical, nursing, public health, social work and other health-related fields

Self-directed students will spend 8 weeks researching, reviewing city documents, and being mentored by key faculty to create a program for a Philadelphia community impacted by climate change.

The project would impact actual Philadelphia events such as:
flooding, extreme heat days, air quality
Incorporated Climate Change topics may include:
infectious disease, vector control, risk communication, mold

Flexible Schedule and Start Date Mid-May | Small Stipend
Supported by the Climate and Urban Systems Partnership (CUSP) Grant

Interested applicants send a cover letter and resume to:
mckeont@upenn.edu by April 20, 2018
